

Theta Discoveries, Inc.

Internet Student Manager ISM 5.0

Theta Discoveries, Inc.

ISM 5.0 Academic Series has been designed to instruct students in the internal workings of Servers, Networks, and Personal Computers. ISM accomplishes this by enabling each Computer Teacher to graphically display information about the systems within their computer LAB and on the internet. During a typical instruction period, Students can access real-time information via their WEB browsers and are able to visually see how things like network traffic, CPU usage and Disk access etc... impacts the school system.

Please call or visit our website for more information .
